

London Borough of Lewisham Air Quality Annual Status Report for 2017 Date of publication: April 2018

This report provides a detailed overview of air quality in London Borough of Lewisham during 2017. It has been produced to meet the requirements of the London Local Air Quality Management statutory process¹.

Abbreviations

AQAP	Air Quality Action Plan
AQMA	Air Quality Management Area
AQO	Air Quality Objective
BEB	Buildings Emission Benchmark
CAB	Cleaner Air Borough
CAZ	Central Activity Zone
EV	Electric Vehicle
GLA	Greater London Authority
LAEI	London Atmospheric Emissions Inventory
LAQM	Local Air Quality Management
LLAQM	London Local Air Quality Management
NRMM	Non-Road Mobile Machinery
PM ₁₀	Particulate matter less than 10 microns in diameter
PM _{2.5}	Particulate matter less than 2.5 microns in diameter
TEB	Transport Emissions Benchmark
TfL	Transport for London

Table A. Summary of National Air Quality Standards and Objectives

Pollutant	Objective (UK)	Averaging Period	Date¹
Nitrogen dioxide - NO ₂	200 µg m ⁻³ not to be exceeded more than 18 times a year	1-hour mean	31 Dec 2005
	40 µg m ⁻³	Annual mean	31 Dec 2005
Particles - PM ₁₀	50 µg m ⁻³ not to be exceeded more than 35 times a year	24-hour mean	31 Dec 2004
	40 µg m ⁻³	Annual mean	31 Dec 2004
Particles - PM _{2.5}	25 µg m ⁻³	Annual mean	2020
	Target of 15% reduction in concentration at urban background locations	3 year mean	Between 2010 and 2020
Sulphur Dioxide (SO ₂)	266 µg m ⁻³ not to be exceeded more than 35 times a year	15 minute mean	31 Dec 2005
	350 µg m ⁻³ not to be exceeded more than 24 times a year	1 hour mean	31 Dec 2004
	125 µg m ⁻³ not to be exceeded more than 3 times a year	24 hour mean	31 Dec 2004

Note: ¹ by which to be achieved by and maintained thereafter

1. Air Quality Monitoring

1.1 Locations

The London Borough of Lewisham (LBL) currently monitors air quality at 3 continuous monitoring stations. The newest monitoring station (LW4) was commissioned in 2012. A fourth station (LW3) was operational until the end of 2015 when it was decommissioned. The details of the monitoring stations in 2017 are given below in Table B. SO₂ and O₃ monitoring ended at LW1 and LW2 in October 2016.

Monitoring of NO₂ with diffusion tubes was carried out at 35 sites in 2017, including one triplicate site co-located with the LW2 continuous monitor at New Cross. In January 2017, two new diffusion tube locations were added to the network at Kender Primary School and Deptford Park Primary School. In September 2017 St James Hatcham School was added to the network. Details of all tube diffusion tube sites in 2017 are given in Table C.

Table B. Details of Automatic Monitoring Sites for 2017

Site ID	Site Name	X (m)	Y (m)	Site Type	In AQMA?	Distance from monitoring site to relevant exposure (m)	Distance to kerb of nearest road (N/A if not applicable) (m)	Inlet height (m)	Pollutants monitored	Monitoring technique

1.2 Comparison of Monitoring Results with AQOs

The results of nitrogen dioxide monitoring carried out by LBL are presented in Table D. Data from the 3 automatic monitoring stations have been fully ratified. Raw data from diffusion tube monitoring sites have been adjusted for bias using a local bias adjustment factor, based on the triplicate tubes co-located with LW2 continuous monitoring station.

Data capture for all monitoring sites was greater than 75%. All diffusion tube locations reported data capture rates greater than 75%, except L37 St James Hatcham School, due to the site being commissioned in September 2017. The annual mean concentration for L37 has been annualised. Details of the annualisation calculations are presented in Appendix A.

Table D. Annual Mean NO₂ Ratified and Bias-adjusted Monitoring Results ($\mu\text{g m}^{-3}$)

Site ID	Site type	Valid data capture for monitoring period % ^a	Valid data capture 2017 % ^b	Annual Mean Concentration ($\mu\text{g m}^{-3}$)

Notes: Exceedance of the NO₂ annual mean AQO of 40 $\mu\text{g m}^{-3}$ are shown in **bold**.

NO₂ annual means in excess of 60 $\mu\text{g m}^{-3}$, indicating a potential exceedance of the NO₂ hourly mean AQS objective are shown in bold and underlined.

^a data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be "annualised" in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%

The 2017 annual mean NO₂ concentrations at the three continuous monitoring locations all exceeded the annual mean NO₂ AQO of 40 $\mu\text{g m}^{-3}$. The highest concentration was 53.9 $\mu\text{g m}^{-3}$ at LW4. Between 2011 and 2017 there has generally been a downward trend in annual mean NO₂ concentrations at the automatic monitoring stations, although the NO₂ concentration increased in 2017 at LW2 (New Cross). At LW1 annual mean NO₂ concentrations have decreased from 51 $\mu\text{g m}^{-3}$ in 2011 to 43.1 $\mu\text{g m}^{-3}$. A similar trend is seen in the data from LW4 where annual mean NO₂ concentrations have decreased from 64 $\mu\text{g m}^{-3}$ in 2012 to 53.9 $\mu\text{g m}^{-3}$ in 2017.

The annual mean NO₂ AQO of 40 $\mu\text{g m}^{-3}$ was exceeded at 10 diffusion tube locations in 2017, which is an improvement from 2016 which saw exceedances at 13 diffusion tube sites. The highest concentration was measured at site L28 (55.5 $\mu\text{g m}^{-3}$), which also recorded the highest concentration in 2016. In terms of temporal trends there is considerable variability between the diffusion tube monitoring locations over the 2011 to 2017 period, although there was an overall decrease in concentrations between 2011 and 2017 at most sites. The triplicate tubes co-located with LW2 continuous monitor at New Cross (L17,

L18, L19) showed evidence of generally decreasing NO₂ from 2011 to 2016, although the greatest reduction took place between 2011 and 2012. The increase in NO₂ at location L27 is due to the site having been re-located to a worst-case location in early 2015.

Over the last 7 years annual mean NO₂ concentration measured at all urban background sites have remained below the annual mean NO₂ AQO of 40µgm⁻³; however L24 and L31 have increased in concentration since 2011. Roadside locations have tended to exceed the AQO. On average, annual mean NO₂ concentrations at roadside and urban background monitoring locations decreased between 2011 and 2017. Annual mean NO₂ concentrations tended to fluctuate somewhat year to year without significantly increasing or decreasing. Concentrations in 2017 were lower at all sites than compared to 2016, excluding L22 which saw a negligible increase.

Table E. NO₂ Automatic Monitor Results: Comparison with 1-hour Mean Objective

Site ID	Valid data capture for monitoring period % ^a	Valid data capture 2017 % ^b	Number of Hourly Means > 200 µg m ⁻³						
			2011 ^c	2012 ^c	2013 ^c	2014 ^c	2015 ^c	2016 ^c	2017 ^c
LW1	99.8	99.8	0	2	3	0	0	0	0
LW2	86.6	86.6	0	0	0	0	7	0	0
LW4	99.7	99.7	-	16 (221) ^c	26	5 (180) ^c	0	9 (184) ^c	4

Notes: Exceedance of the NO₂ short term AQO of 200 µg m⁻³ over the permitted 18 days per year are shown in **bold**.

^a data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be “annualised” in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%

In 2017, no exceedances of the hourly mean NO₂ AQO value (200µgm⁻³) were recorded at the LW1 and LW2 automatic monitoring locations. At LW4, 4 exceedances of the hourly mean NO₂ AQO value were recorded during the year, which is within the 18 permitted hours for compliance with the hourly NO₂ AQO. In the past 7 years there has been no obvious trend, however all locations tend to stay within the AQO of 200µgm⁻³ fewer than 18 times a year.

At LW1, the urban background site, there have been three or fewer exceedances of the hourly NO₂ AQO value in any one year since 2011, with no exceedances recorded from 2014 onwards.

At LW2, a roadside site, during the 2011 to 2017 period, hourly averaged NO₂ concentrations greater than 200µgm⁻³ have only been recorded in 2015 (7 hours). At LW4, in 2013 there were 26 hours exceeding the hourly NO₂ AQO value, therefore the 1-hour mean objective was not achieved. In 2012, the first year of monitoring at this location, there were 16 hours exceeding the hourly NO₂ AQO value; due to data capture being below 75% in 2013 the 99.8th percentile of hourly NO₂ concentrations was calculated for comparing against the 1-hour mean objective. The 99.8th percentile result was 221 µgm⁻³, indicating that the 1-hour mean objective was likely to have been exceeded. Since 2014 the 1-hour mean NO₂ objective has been achieved.

Table F. Annual Mean PM₁₀ Automatic Monitoring Results (µg m⁻³)

Site ID	Valid data capture for monitoring period % ^a	Valid data capture 2017 % ^b	Annual Mean Concentration (µg m ⁻³)						
			2011	2012	2013	2014	2015	2016	2017
LW2	81.9	81.9	26	26	23	23 ^c	23	24	22.8
LW4	85.8	85.8	-	24	28	25 ^c	17	26 ^c	20.9

Notes: Exceedance of the PM₁₀ annual mean AQO of 40 µg m⁻³ are shown in **bold**.

^a data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be “annualised” in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%

The annual mean PM₁₀ concentrations recorded at the two automatic monitoring stations that measure particulate matter were well below the AQO of 40µgm⁻³ in 2017, and for all years since 2011. In 2017, LW2 recorded the highest PM₁₀ annual mean concentration of 22.8µgm⁻³. LW4 showed a significant decrease in 2017 from 2016 concentrations. The highest recorded annual mean PM₁₀ concentration during 2011 to 2017 period was 28µm⁻³ at LW4 in 2013.

Over the last 7 years annual mean PM₁₀ concentrations at LW2 automatic monitoring station has been stable with only small changes from one year to the next. At LW4, where monitoring commenced in 2012, there have been larger variations in concentrations from year to year, with a notable decrease in 2015 compared to 2014 and 2016.

Table G. PM₁₀ Automatic Monitor Results: Comparison with 24-Hour Mean Objective

Site ID	Valid data capture for monitoring period % ^a	Valid data capture 2017 % ^b	Number of Daily Means > 50 µg m ⁻³						
			2011 ^c	2012 ^c	2013 ^c	2014 ^c	2015 ^c	2016 ^c	2017 ^c
LW2	81.9	81.9	19	15 (47) ^c	15	14 (38) ^c	8	9	11
LW4	85.8	85.8	-	3 (36) ^c	19	13 (41) ^c	1	18 (47) ^c	7

Notes: Exceedance of the PM₁₀ short term AQO of 50 µg m⁻³ over the permitted 35 days per year or where the 90.4th percentile exceeds 50 µg m⁻³ are shown in **bold**.

Where the period of valid data is less than 85% of a full year, the 90.4th percentile is shown in brackets after the number of exceedances.

^a data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be “annualised” in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%

Both LW2 and LW4 achieved the 24-hour mean PM₁₀ AQO in 2017. In all years since 2011, all of the PM₁₀ monitoring locations have achieved the 24-hour mean PM₁₀ AQO. The highest numbers of exceedances of the daily mean PM₁₀ objective value (50 µg m⁻³) was 18 days in 2016 at LW4. This is well within the 35 permitted exceedances per year for compliance with the AQO. However, due to data capture at LW4 in 2016 being less than 75%, the 90.4th percentile of daily mean PM₁₀ concentrations was calculated (47 µg m⁻³). This value, which is less than 50 µg m⁻³, indicates the AQO was likely to have been achieved.

Table H. Annual Mean PM_{2.5} Automatic Monitoring Results (µg m⁻³)

Site ID	Valid data capture for monitoring period % ^a	Valid data capture 2017 % ^b	Annual Mean Concentration (µg m ⁻³)						
			2011 ^c	2012 ^c	2013 ^c	2014 ^c	2015 ^c	2016 ^c	2017 ^c
LW2	81.5	81.5	-	-	17.6	16.5	15.5	18.9	15.5

Notes: Exceedance of the PM_{2.5} annual mean AQO of 25 µg m⁻³ are shown in **bold**.

^a data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be “annualised” in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%

The results of PM₁₀ monitoring carried out by LB of Lewisham are presented in Table H.

Since 2013, the LBL has monitored PM_{2.5} concentrations at site LW2. In 2017, the annual mean PM_{2.5} concentration measured was 15.5 µg m⁻³, which is below the annual mean PM_{2.5} target value of 25 µg m⁻³; this is a decrease from the value of 18.9 µg m⁻³ recorded in 2016, and is the lowest annual mean PM_{2.5} concentration along with 2015 at this site since monitoring began in 2013. The annual mean PM_{2.5} concentration has been below the annual mean PM_{2.5} target value in all years since monitoring commenced.

2. Action to Improve Air Quality

London Borough of Lewisham contains eight Air Quality Focus Areas (AQFAs), which are areas with some of the poorest air quality in Lewisham, and are the focus of targeted actions to improve air quality. The AQFAs in LBL are:

125. Brockley Cross
126. Catford Road and Catford Gyratory
127. Deptford Town Centre
128. Forest Hill and Perry Vale Junction
129. St Mildreds Road (A205) from Hither Green Lane to Burnt Ash Hill (A2212)
130. Honor Oak Park junction Brockley Road
131. Lewisham Loampit Vale and Lewisham High Street
132. New Cross Gate and New Cross
133. Brockley Road (B218) between Adelaide Avenue and Wickham Road

A map of the focus areas can be found in Appendix A, Figure A.7.

A summary of specific commitments to tackling poor air quality in LB Lewisham can be found in Table I below.

2.1 Air Quality Action Plan Progress

2017 was a very important year for Lewisham in raising the profile on air quality. The Lewisham Mayor laid out his commitment by launching an [Air Quality Campaign](#), approved by Mayor and Cabinet in June 2017, this focused on behavioural change by all whilst providing a focused approach with children, schools, transport and infrastructure projects coupled with an evidenced based approach. The Mayor appointed his own Air Quality Champion. With links to academic research and development, Lewisham hosted the [MRC Festival 2017, Our Air, Your Health](#), with a history of air pollution in Deptford (1661 – 2017) as one of the academic talks on air quality. An Air Quality Master Class was provided to Lewisham Councillors, by Kings College London. Preparations were made for a Lewisham Air Quality Conference, open to the public and also a School Air Quality Event, both to be held in March 2018, with the plans for the promotion of the new [Lewisham Air app](#) and also the pilot scheme for an Air Quality School Accreditation Scheme.

Preparation and plans for the expansion of Lewisham’s Air Quality monitoring took place in 2017 with the introduction of an additional 17 diffusion tube locations i.e. from 33 to 50 and a contribution made by the Council towards the installation of an [Air Quality Supersite](#), at Honour Oak Park Sports Ground, planned for summer 2018. This is a new million pound air pollution research lab, with primary funding from Natural Environment Research Council (NERC).

Table J provides a brief summary of the London Borough of Lewisham progress against the Air Quality Action Plan, showing progress made this year. New projects which commenced in 2017 are shown at the bottom of the table.

Table J. Delivery of Air Quality Action Plan Measures

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
1	Emissions from developments and buildings	Ensuring emissions from construction are minimised	Number of applications for the discharge of the Construction Logistics Plan and the Construction Environmental Management Plan approved: <i>10 x applications for Approval of construction Logistics plan & 47 x applications for approval of construction management/Environmental plans</i>	42 Construction Logistics Plan applications and 47 Construction (Environmental) Management Plan discharged. A new Local Plan is being developed in 2018. Environmental Protection Policies are being considered as part of this process and these will be informed by policies developed in the new London Plan. As part of the process wording for the condition/s controlling emissions from construction will be considered, along with the review and development of current guidance.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
2	Emissions from developments and buildings	Ensuring enforcement of Non Road Mobile Machinery (NRMM) air quality policies	Number of NRMM conditions recorded, and all sites checked on the NRMM database once construction begins: See Table L.1 for more details	See Table L for details. The development of policy in the new London Plan will strengthen enforcement of NRMM.
3	Emissions from developments and buildings	Enforcing alternative clean and efficient energy supplies (to replace Enforcing CHP and biomass air quality policies)	Planning to review abatement conditions in 2017 and report in 2017 ASR.	An energy assessment is required for every major application. An energy assessment must include: - a response to the 3 stages of the Mayor's Energy hierarchy demonstrating compliance with each stage - a calculation of the baseline energy demand and carbon dioxide emissions (with evidence of how it has been calculated) - details of the performance of the building - a feasibility study of all renewable technologies - the proposed technical solution - an explanation of where and why the proposed development does not meet identified standards. - a fully completed 'Monitoring for Sustainability' form (can be downloaded from the Council's website: http://www.lewisham.gov.uk/myservices/planning/policy/Documents/SustainabilityMonitoringForm.pdf).
4	Emissions from developments and buildings	Enforcing Air Quality Neutral policies	Air Quality Neutral Assessments reviewed: See Table L.1 for more details	See Table L for details. The development of policy in the new London Plan will strengthen the Air Quality Neutral requirements.
5	Emissions from developments and buildings	Ensuring adequate, appropriate, and well located green space and infrastructure is included in new developments	To review a list of appropriate tree/planting species which aid Air Quality in 2017. Greenspace provision: See Table L.1 for details	Public realm improvements provided in community green space at: GARAGES AND GREEN SPACE (AT REAR OF 182-244 WOOD VALE), BUCKLEY CLOSE, LONDON, SE23 3EQ. In addition to this Quietway routes provided improved aesthetics and greening and was introduced in 2016 and had initial increase in use of 38% over 2017.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
				<p>The Council is encouraging community tree planting: https://www.lewisham.gov.uk/myservices/environment/trees/Pages/Tree-planting-scheme.aspx . A list of Tree species for air quality improvement has not been produced as there is only general advice on species available i.e. Due to the larger total surface area of needles, coniferous trees have a larger filtering capacity than trees with deciduous leaves (Stolt, 1982). This capacity is also greater because the needles are not shed during the winter, when the air quality is usually worse. However, coniferous trees are sensitive to air pollution and deciduous trees are better at absorbing gases (Stolt, 1982). A mix of species therefore seems to be the best alternative. Air pollution filtering capacity increases with more leaf area, and is thus higher for trees than bushes or grassland (Givoni, 1991).</p>
6	Emissions from developments and buildings	Ensuring that Smoke Control Zones are appropriately identified and fully promoted and enforced	Council Wide Publicity Campaign to be organised for late Spring/early Summer 2017 where information on Smoke Control Areas and requirements will be promoted.	Lewisham focused on the Lewisham Mayor's Air Quality campaign (See 2.1 introduction to table) Publicity around Smoke Control Zones is now planned for Winter 2018, where we'll work with the London Mayor in providing information and requirements to reduce the air quality impact.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
7	Emissions from developments and buildings	Promoting and delivering energy efficiency retrofitting projects in workplaces and homes, including through using the GLA RE:NEW and RE:FIT programmes, where appropriate, to replace old boilers /top-up loft insulation in combination with other energy conservation measures.	Individual projects will establish their own monitoring in line with the requirements of funders and the availability of data. Ongoing delivery of the Warm Homes, Healthy People scheme which is currently scheduled to run until August 2017. Publicising the Mayor of London's 'Better Boilers' scheme to residents. Seeking to access the new round of ECO funding when it is released in April 2017.	Lewisham's Warm Homes Healthy People fuel poverty advice service was delivered in 250 homes in 2017/18. Actions taken by residents reduced emission by 83tCO ₂ e. In 2018/19 the project will extend to cover Bexley, Bromley, Greenwich, Lewisham and Southwark with support from the GLA. Lewisham in partnership with South East Community Energy and Retrofit Works are enabling residents to access energy company funding for heating and insulation improvements, in 2017/18 152 measure were installed.
7A	Emissions from developments and buildings	Introduce a requirement for a minimum EPC rating for privately rented sector HMOs covered by both the mandatory and additional licensing schemes	Ongoing.	Works recommended in EPC inspection report to ensure property has a rating of 'E' or above is included in licensing conditions of HMO's. Enforcement action carried out if EPC forms not submitted. <i>Also where Council procure properties for use by the Council for temporary accommodation this also meets a minimum EPC rating of 'E'.</i>

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
7B	Emissions from developments and buildings	Introduce a requirement for any works covered by the Disabled Facilities Grant or discretionary housing improvement grants to meet level D EPC rating in privately owned accommodation	Still considering monitoring of action. Which will be updated on the 2017 ASR submission.	The action has not been implemented due to staffing changes and reorganisation but has been raised with the new team management and will be considered in any future reviews of the Council's housing assistance policy and an update will be provided in the next ASR. However, from 1st April with Empty homes grants (Discretionary grant) officers will make sure that properties brought back into use under these grants meet the Government's requirement of at least a minimum EPC rating of 'E' on completion. The mandatory Disabled Facilities Grant helps homeowners and tenants to fund home adaptations and this is not something the Council can currently include.
8	Public health and awareness raising	Ensure that Directors of Public Health (DsPHs) have been fully briefed on the scale of the problem in the local authority area, what is being done, and what is needed.	This ASR in draft form was reviewed at Lewisham's Health Protection Committee in March 2017 where actions were considered and approved.	The ASR was presented to the DMT for Community Services. The Director of Public Health is part of this management team.
8A	Public health and awareness raising	The Council's political leadership will champion the issue of air quality inside and outside of the borough	Dedicated Communication officer currently reviewing all publicity and campaigns in relation to Air Quality for 2017.	The Lewisham Mayor's Air Quality campaign (See 2.1 introduction to table), included the appointment of the Mayor's Air Quality Champion.
9	Public health and awareness raising	Public Health Teams should be supporting engagement with local stakeholders (businesses, schools, community groups and healthcare providers). They should be asked for their support via the DsPH when projects are being developed.	In 2017 will be reviewing development of Healthy Weight Strategy and synergy with sustainable transport and potential for air quality improvements with reduction in car use being considered.	The Healthy Weight Strategy developer in 2017 has as one of its main aims to 'promote an environment that supports healthy weight and wellbeing as the norm, making it easier for our residents to choose healthier diets and active lifestyles.' There are synergies to air quality improvement with a more active lifestyle and these links are being developed.
10	Public health and awareness raising	Director of Public Health to have responsibility for	Public Health element of the JSNA is currently being refreshed.	JSNA for Air Quality was refreshed in 2017.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
		ensuring their Joint Strategic Needs Assessment (JSNA) has up to date information on air quality impacts on the population	Public Health intelligence team is awaiting updated data from GLA. JSNA refresh is planned to be completed in May 2017.	
11	Public health and awareness raising	Strengthening co-ordination with Public Health by ensuring that at least one Consultant-grade public health specialist within the borough has air quality responsibilities outlined in their job profile	The Health and Wellbeing Strategy for 2018-2020 being reviewed in 2017. Air Quality is being considered and drafted for consideration and inclusion in strategy.	Provided Lewisham Health Protection Committee air quality updates. The Health and Wellbeing Strategy is still being drafted.
12	Public health and awareness raising	Director of Public Health to sign off Statutory Annual Status Reports and all new Air Quality Action Plans	This ASR in draft form was reviewed at Lewisham's Health Protection Committee in March 2017 where actions were considered and approved.	The ASR was presented to the DMT for Community Services. The Director of Public Health is part of this management team.
13	Public health and awareness raising	Ensure Head of Transport fully briefed along with all Directors responsible for delivering air quality actions. Briefing to disseminate amongst transport team.	Briefing through Steering Group that meets every 6 months. This ASR in draft form was reviewed by the DMT where actions were considered and approved. Also regular working groups set up with Transport teams to consider potential for further Air Quality initiatives.	Provided brief through Bi monthly Air Quality Working Groups and also Strategic Air Quality Board meetings every quarter. Also separate focused meetings with transport in relation to Electric Vehicle provision and school projects.
14	Public health and awareness raising	Engagement with businesses	Number of applications for the discharge of the DSP condition approved: 10 applications. Condition wording:	Number of applications for the discharge of the DSP condition approved: 11 applications. Promoted dilverBest at the 2017 Mayor's Business Award . As a result of this one Lewisham-based business (Fronte)

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
			<p>(a) The development shall not be occupied until a Delivery and Servicing Plan has been submitted to and approved in writing by the local planning authority.</p> <p>(b) The plan shall demonstrate the expected number and time of delivery and servicing trips to the site, with the aim of reducing the impact of servicing activity.</p> <p>(c) The approved Delivery and Servicing Plan shall be implemented in full accordance with the approved details from the first occupation of the development and shall be adhered to in perpetuity.</p> <p>Reason: In order to ensure satisfactory vehicle management and to comply with Policy 14 Sustainable movement and transport of</p>	<p>linked in with the scheme as they promote their new sustainable delivery option (see: https://www.fronte.co.uk/sustainable-parcel-delivery-with-click-and-collect/), along with contacts with many local businesses.</p> <p>DEFRA bid application for Cleaner Villages was successful, which will provide engagement with businesses with two of the Air Quality Focus Areas, i.e. Lewisham Town Centre and Deptford Church Street. See ID 46 and 47 for new action to report for next ASR.</p>

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
			the Core Strategy (June 2011).	
15	Public health and awareness raising	Promotion of availability of airTEXT	<ul style="list-style-type: none"> • Raise awareness of air quality at strategic groups such as the Lewisham CYP Asthma Network • Influence local health economy stakeholders (including Lewisham CCG & UHL) to encourage clinicians to sign up to resources such as the airTEXT which they can share with relevant patient groups • Ensure frontline healthcare workers are aware of, and respond to air quality alerts, by promoting key public health messages to their vulnerable patients/service users • Total of 150 subscribers to airTEXT within Lewisham in 2016. Last half of 2016, 21 new subscribers included. 	<p>Total subscribers to air text in Lewisham in 2017 is 173. In 2017 continued to target the same groups as last year. In 2017 the Lewisham Air app was developed.</p> <p>'The promotion of availability of air TEXT' action next year also to include 'The promotion of availability of Lewisham Air app' action. Launched in March 2018, the numbers downloaded have risen to 300 (end of April).</p>

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
			<ul style="list-style-type: none"> • Over 500 people had a lung test during the Healthy Lung campaign at the OnBlackheath festival in 2016, part funded by the Council. The airTEXT service was actively promoted during the two day festival. • 101 e-mail contacts to respondents of AQAP consultation, requesting details on airTEXT 	
16	Public health and awareness raising	Encourage schools to join the TfL STARS accredited travel planning programme by providing information on the benefits to schools and supporting the implementation of such a programme	80% of schools in the borough having an accreditation in 15/16. Work ongoing.	Schools continue to take part in the STARS programme. More targeted work is planned for 2018/19 to look at detailed travel planning and support to reduce the numbers of parents driving to school. Before and after Evaluation will be monitored and known behaviour change models will be used to maximize change.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
17	Public health and awareness raising	Air quality at schools	Offer an air quality/ sustainability play for year 6 pupils at 28 schools. Riot Act arranged for 14 schools for 2017. http://theriotact.co.uk/ This is a school engagement project using theatre to promote sustainable travel to school and raise awareness of the effects of poor air quality.	Through the Mayors Air Quality campaign we have worked with schools through the School Travel Plan. This has included the running of idlingaction events at three schools. The procurement of 50 anti-idling signs that will be introduced at designated schools in 2018. In 2017 work was carried out in the development of a School Air Quality Accreditation scheme for Lewisham, which is being piloted and planned launch in 2018/19 academic year. A new School Travel Plan officer is to be appointed to work with schools from 2018 and an Air Quality apprentice is working with them to visit and support schools.
17 A	Public health and awareness raising	Air quality at schools	Offer Cycle training to schools and appoint Lollipop personnel to provide proficiency and safety for cycling and walking to school.	All primary schools are offered Bikeability for their Year 5/6 pupils. Balance Bike training was carried out at 20 schools. Scooter training courses are booked for the Summer term in 2018.
18	Delivery servicing and freight	Update local authority Procurement policies to include a requirement for suppliers with large fleets to have attained silver Fleet Operator Recognition Scheme (FORS) accreditation	Procurement reviewing in April 2017	A programme of internal staff training was provided in 2017 with a specific focus on air quality and procurement delivery.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
19	Delivery servicing and freight	Update Procurement policies to ensure sustainable logistical measures are implemented (and include requirements for preferentially scoring bidders based on their sustainability criteria)	Procurement reviewing in April 2017 to ensure sustainable and localized air quality issues are considered. The Asset Management Strategy will have benefits as to the energy uses, particularly in relation to low NOx boilers etc.	A programme of internal staff training was provided in 2017 with a specific focus on air quality and procurement delivery.
20	Delivery servicing and freight	Re-organisation of freight to support consolidation (or micro-consolidation) of deliveries, by setting up or participating in new logistics facilities, and/or requiring that council suppliers participate in these	MAQF2 project at Evelyn Street Corridor, evaluated possibility of freight consolidation to support construction sites in the area but not seen as viable. Although Lewisham is not part of the Low Emission Logistics project we are being kept up to date on the review of a delivery consolidation area in the South/South East of London.	Considered as a potential action as part of the LIP3 process, which will develop a transport strategy and implementation plan for the borough. Draft document for consultation in Autumn 2018, with final version approved by February 2019.
21	Delivery servicing and freight	Virtual Loading Bays and priority loading for ultra-low emission delivery vehicles	This has been reviewed but is not currently seen as being appropriate given the logistics of delivery and servicing areas within the borough.	This has been reviewed but is not currently seen as being appropriate given the logistics of delivery and servicing areas within the borough.
22	Borough fleet actions	Join the Fleet Operator Recognition Scheme (FORS) for the borough's own fleet and obtain Gold accreditation	Ongoing.	FLEET no longer consider necessary to join the FORS scheme due to the admin burden that it will place on the reduced staff levels. Also question the benefits in terms of improving air quality as the rolling driver CPC training includes in the

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
				<p>syllabus “driving effectively, efficiently to reduce emissions and improve safety.”</p> <p>PROPOSE to remove this as an Action.</p>
23	Borough fleet actions	Increasing the number of hydrogen, electric, hybrid, bio-methane and cleaner vehicles in the boroughs’ fleet	All lease cars are hybrid/electric. Continuing to work with LoCity to consider further uptake of vehicles.	Added to the fleet another HY-BRID refuse vehicle to work on Lewisham market this takes the total to 2.
24	Borough fleet actions	Accelerate uptake of new Euro VI vehicles in borough fleet	REVISED: 48 trucks will be upgraded to Euro VI during 17/18. Procurement in process.	<p>Reduced the order to 33 from 48 due to fleet rationalising and route analysis.</p> <p>The next step is to replace 15 Euro 5 refuse trucks and 49 Euro 5 buses before the ULEZ deadline Oct2020, which may reduce due to further rationalisation. Once this next order is placed and delivered all of LBL fleet will be at Euro 6.</p> <p>Any short term hired in vehicles that are required are always Euro 6 as standard.</p>
25	Borough fleet actions	Smarter Driver Training, or equivalent, for drivers of vehicles in Borough Own Fleet i.e. through training of fuel efficient driving and providing regular re-training of staff	Driver training is on-going in order to comply with driver CPC regulations.	Continue to run CPC training which includes in the syllabus “driving effectively, efficiently to reduce emissions and improve safety.”
26	Localised solutions	Improvement and Introduction of green spaces in new developments through the Planning process by conditions and S106 obligations.	Charlottenberg Park in New Cross and Surrey Canal Linear Park in Deptford have both opened in 2016	See Action 5 for further information. Also New linear park for Pepys Estate being extended, opening up the former canal bridge, to connect the Deptford Wharves development. Proposals for improving Beckenham Place Park in progress over 2017. Lewisham Gateway confluence

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
				park planned progress 2018/2019
27	Localised solutions	Low Emission Neighbourhoods (LENs)	N/A	N/A
28	Cleaner transport	Discouraging unnecessary idling by vehicles near schools	Advice and guidance about anti-idling and impact on poor air quality provided to school head teachers in January 2017 for inclusion in their bulletins. Follow up planned for April 2017. The anti-idling participation piloted at one school and will be rolled out at priority schools to be identified before Summer 2017 in time for campaign.	Idling action events held at 3 schools. The end of year report provided details on success. Also a priority within the Lewisham Mayor's Air Quality Campaign (see introduction to Table)
28 A	Cleaner transport	Carry out a Council wide anti-idling campaign discouraging unnecessary idling by idling vehicles	Dedicated Communication officer currently reviewing all publicity and campaigns in relation to Air Quality for 2017.	Idling action events held at 3 schools. The end of year report provided details on success. Also a priority within the Lewisham Mayor's Air Quality Campaign (see introduction to Table)
29	Cleaner transport	Speed control measures e.g. lowering the legal speed limit to 20mph in built up residential areas	All Lewisham Roads included in 20 mph zones from September 2016. <i>See 'AQFA integration with LIP' for details on streetscape schemes to assist with 20 mph.</i>	The borough wide 20mph limit was implemented in September 2016. Monitoring has been carried out which has shown reductions in speed as a result. However, physical measures will be required on some streets to assist with compliance. These streets are currently being prioritised and potential measures identified. The borough is also encouraging TfL to introduce 20mph on the parts of the network that it is responsible for.

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
30	Cleaner transport	Expanding car clubs and Increasing the proportion of electric, hydrogen and ultra-low emission vehicles in Car Clubs	<p>Car club bays provided via Planning in 2016: <i>See Table L.1 for more details</i></p> <p>A strategy for the provision of Electric Vehicle Charging Points is currently being formulated. This action will be considered within the strategy. We are increasing the number of electric vehicle charge points across the borough which would also facilitate the increase of car club activity, such as Blue City.</p>	<p>1 Car club bay provided at HAZELHURST COURT, BECKENHAM HILL ROAD, BROMLEY, SE6 3AG development and</p> <p>For all car free developments we have secured car club memberships. For instance in 2017 this was conditioned and discharged for 437-439 BROCKLEY ROAD, LONDON, SE4 2PJ, KENT WHARF, CREEKSIDE, LONDON, SE8 3DZ,</p> <p>Officers are currently in discussions with Zipcar (the borough's only current car club) about the potential introduction of further electric vehicles to its fleet. Zipcar has plans to gradually introduce more EVs to their Zipcar flex operations (point to point model). However, for the fixed bays it is harder to achieve without the necessary supporting infrastructure. Boroughs are limited on the degree to which they can assist with the implementation of EVCPs in fixed car club bays due to state aid rules. The Council is in discussion with other car club providers.</p>
31	Cleaner transport	Very Important Pedestrian Days (e.g. no vehicles on certain roads on a Sunday) and similar initiatives	Investigating road closures around school times at appropriate school locations. Three pilot schools Tidemill, Lucas Vale and All Saints for 2017. Already happens at Kelvin Grove Primary School.	Considering roads, but need to assess full impact on surrounding streets. For Walk to School Week in 2018, Athelney Primary School is trialling this and will feedback. VIP campaign will take place in September 2018.
32	Cleaner transport	Free or discounted parking charges at existing parking meters for zero emission cars	This will be considered within the Parking review which is planned for later in the 2017.	This will be considered within the Parking review which has been delayed and will go to Mayor and Cabinet at the end of 2018/19. Air quality is being factored into this review.
33	Cleaner transport	Free or discounted residential parking permits for zero emission cars	During the year (2015/2016) a total of 9,428 resident and business parking permits were	During the year (2016/2017) a total of 16,000 resident and business parking permits were issued. Permits issued to lower emission vehicles and sold at a concessionary rate was 345,

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
			<p>issued, an increase of 4.5% on last year. Permits issued to lower emission vehicles and sold at a concessionary rate, represent 1.5% of the total which is a slight increase of 0.8% from that of last year. Further information see http://www.lewisham.gov.uk/my-services/parking/Pages/default.aspx</p>	<p>represent 5.75% of the total which is an increase of 4% from that of last year.</p> <p>The Parking review which has been delayed and will go to Mayor and Cabinet at the end of 2018/19 will consider charges and concessions. Air quality is being factored into this review.</p>
34	Cleaner transport	Surcharge on diesel vehicles below Euro 6 standards for Resident and Controlled Parking Zone permits	Given the potential for the London Mayor to expand the ULEZ to include all areas of Lewisham, north of the South Circular (where the majority of resident and controlled parking zones are based), it is not considered appropriate to increase any financial burden further.	This will be considered within the Parking review which has been delayed and will go to Mayor and Cabinet at the end of 2018/19. Air quality is being factored into this review.
35	Cleaner transport	Installation of residential electric charge points	<p>A strategy for the provision of Electric Vehicle Charging Points is currently being formulated. This action will be considered further after the production of this strategy. It will consider residential, car club and rapid charging provision.</p> <p>14 Additional residential on street sites have been approved</p>	<p>There are currently 29 EVCPs in 10 locations, including 6 in Council managed car parks.</p> <p>The Council will be consulting on its EVCP strategy in late spring/early summer 2018, with a final document approved by the end of the year. This will set out our plans for expansion of the charging network over the next four years (to 2022).</p> <p>In partnership with Source London we are currently consulting on a further 14 sites for 7kw chargers, with a view to seeing</p>

			for installation. Date of installation now planned for Summer 2017.	<p>these implemented by the end of 2018, subject to consultation. This has been delayed from last year in order to agree on legal arrangements.</p> <p>Officers are also starting to talk to other providers about introducing lamp column charging and complementing the Source London network with additional 7kw chargers run by other operators.</p>
35 A	Cleaner transport	Carry out a campaign to promote the use of electric charge points within the borough.	A campaign will be coordinated after the production of the strategy and after the EVCPs expansion. It is likely that this will take place during the Summer 2017. See above.	<p>Campaign wasn't carried out in 2017, as the production of the strategy was still being consulted internally. Lewisham had an Air Quality Conference in March 2018 where the principles of the strategy were communicated.</p> <p>As part of the launch of the draft EVCP strategy, public consultation, the Council will make a call for suggestions for new EVCP locations. A publicity campaign is planned for the end of the 2018/19 financial year, with details on new locations.</p>

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
36	Cleaner transport	Installation of rapid chargers to help encourage the take-up of electric taxis, cabs and commercial vehicles (in partnership with TfL and/or OLEV)	Working with TfL on where spaces can be allocated within Lewisham. This will be considered within the strategy being drawn up. This is also being considered within the Council's strategy for EVCPs provision.	Officers are working in partnership with TfL to progress a number of rapid charging points. An initial long list of 20 sites across the borough (mixture of land ownership) has been identified, with two sites implemented to date.
37	Cleaner transport	Reprioritisation of road space; reducing parking at some destinations and/or restricting parking on congested high streets and A-roads to improve bus journey times, cycling experience, and reduce emissions caused by congested traffic	<p>See link for the Annual Parking report: http://www.lewisham.gov.uk/my-services/parking/Pages/default.aspx</p> <p>The 2016 report will soon be available to review on-line.</p>	<p>See link for the Annual Parking report: http://www.lewisham.gov.uk/my-services/parking/Pages/default.aspx for the 2016/2017</p> <p>The total number of CPZs operating in the borough at the end of 2016/17 was 22. Which will increase to 23 in 2017/18 as part of the CPZ implementation programme.</p> <p>Also approval for 18/19 CPZ programme received with proposals for a further four zones.</p> <p>CS4 designs have gone through public consultation in September 2017, the full results of this consultation have not been published (expected June 2018) Expect detailed design to start in 2018 and construction to start in 2019 and it'll last 1 year.</p> <p>Over the past 6 month the Council have been assessing sites for the locating of hangers we now have the 1st phase of hanger consulted on and are awaiting the award of the new contract to the supplier to start installation. Once the</p>

ID	Action Category	Action	Progress and planned action presented in 2016 ASR	Progress 2017 and Planned Future Action
				contractor is on board the Council will continue to roll out phase of hanger every 6 month funding dependant.
38	Cleaner transport	Provision of infrastructure to support walking and cycling	<p>Quietway 1 completed and further work on linking the existing cycle route – Waterlink Way – to the Q1 is ongoing.</p> <p>Details are to be reported to TfL through a LiP yearly report.</p>	3 Quietway route are in development with completion expect 2019. Lewisham Council was successful in securing feasibility funding for the Deptford parks Liveable neighbourhoods fund from TfL . This feasibility work is going to be carried out over 2018 to inform concept designs hopefully available by early 2019. Schemes include, re assigning road space to create a pocket park, reducing traffic and greening roads, creating a traffic free walking route from the river Thames to New cross via a new green way and other smaller intervention identified through public consultation.
39	Cleaner transport	Develop a ‘stand-alone’ Cycling Strategy for the borough.	<p>Being developed 2016/17 and to be published in 2018.</p> <p>Internal reporting and LiP yearly reporting.</p>	The Cycling Strategy was adopted in late 2017.
40	Cleaner transport	Increasing cycle parking	<p>Ongoing initiative.</p> <p>Already being provided but will be increased year on year.</p> <p>Internal reporting and LiP yearly reporting on increase in parking.</p>	See Section 10 of the Cycling Strategy .

3. Planning Update and Other New Sources of Emissions

Table L gives a summary of planning requirements relating to air quality in the London Borough of Lewisham in 2017, with Table K.2 presenting additional information on developments in 2017. Table K.1 shows the Non-road mobile machinery visits which were carried out in 2017.

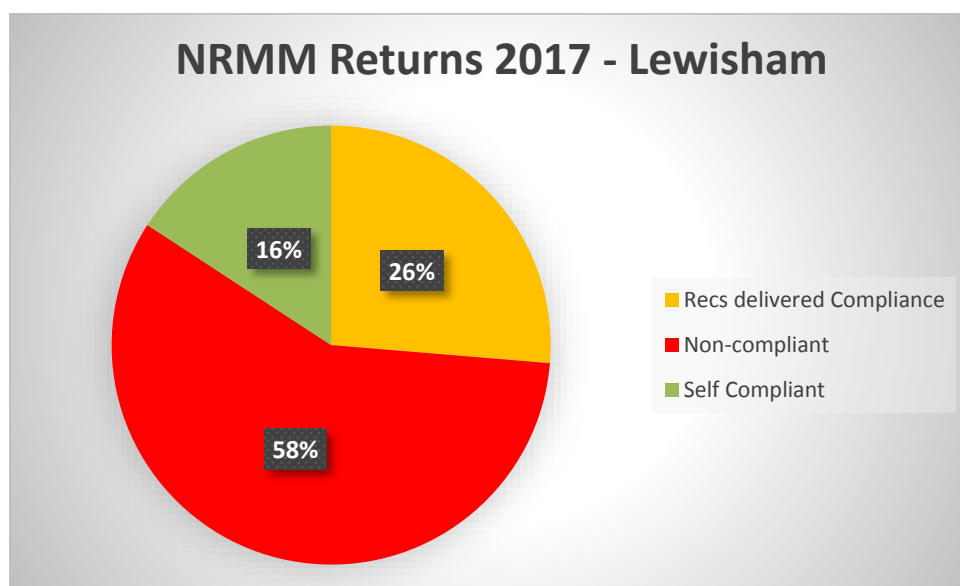

Table L. Planning requirements met by planning applications in London Borough of Lewisham in 2017

Condition	Number
Number of planning applications where an air quality impact assessment was reviewed for air quality impacts	18
Number of planning applications required to monitor for construction dust	47
Number of CHPs/Biomass boilers refused on air quality grounds	1*
Number of CHPs/Biomass boilers subject to GLA emissions limits and/or other restrictions to reduce emissions	1
Number of developments required to install Ultra-Low NO _x boilers	0
Number of developments where an AQ Neutral building and/or transport assessments undertaken	17
Number of developments where the AQ Neutral building and/or transport assessments not meeting the benchmark and so required to include additional mitigation	1*
Number of planning applications with S106 agreements including other requirements to improve air quality	0
Number of planning applications with CIL payments that include a contribution to improve air quality	0
NRMM: Central Activity Zone and Canary Wharf Number of conditions related to NRMM included. Number of developments registered and compliant. Please include confirmation that you have checked that the development has been registered at www.nrmm.london and that all NRMM used on-site is compliant with Stage IIIB of the Directive and/or exemptions to the policy.	N/A
NRMM: Greater London (excluding Central Activity Zone and Canary Wharf) Number of conditions related to NRMM included. Number of developments registered and compliant. Please include confirmation that you have checked that the development has been registered at www.nrmm.london and that all NRMM used on-site is compliant with Stage IIIA of the Directive and/or exemptions to the policy.	There were no specific condition included, but 17 sites in their AQ Assessment provided details of meeting NRMM requirements within their submission. SEE Table K.1. We are part of a consortium of boroughs with a dedicated officer visiting.

* The particular development initially failed its building AQ Neutral Assessment, based around CHP proposed. A further AQ Assessment is required to address and specifying plant that will meet requirements – details still to be received.

Table K.1 NRMM visits

NRMM Visits						
Sites Audited 2017	Cold Engaged	Returned Compliance	n{visits}	Recs delivered Compliance	Non-compliant	Self-Compliant
16	3	8	17	5	11	3

A lot of the ‘non-compliant’ sites were not of concern in terms of their emissions, but simply didn’t upload their data to the GLA website, so they are ‘technically compliant’. Where the officer encounters un-registered sites in the course of their activity they do seek to engage them.

Further NRMM sites have been identified within 2017 through the planning process. These details have been forwarded onto the officer for visit in 2018, increasing the number of sites shown below in Table K.2.

No news sources identified.

Appendix A Details of Monitoring Site QA/QC

A.1 Automatic Monitoring Sites

Calibrations of continuous gas monitors are carried out with certified calibration gases for each analyser. Routine calibrations are undertaken manually every 2 weeks by the Local Authority Officer for LW1 and LW4. At LW2, a nightly auto-calibration is invoked.

The calibration data are sent to ERG-King's College London, who are responsible for data management, data validation and ratification. Site audits are carried out annually, and includes UKAS accredited on-site gas cylinder certification and on-site testing of sampling system efficiency.

PM₁₀ Monitoring Adjustment

TEOM PM₁₀ measurements are corrected using the Volatile Correction Model (VCM) by ERG-King's College London.

A.2 Diffusion Tube Quality Assurance / Quality Control

Diffusion tubes for NO₂ in LB of Lewisham are provided by Gradko International Ltd, using a preparation method of 50% Triethanolamine (TEA) in acetone.

Gradko participate in the AIR PT scheme. AIR is an independent analytical proficiency-testing (PT) scheme, operated by LGC Standards and supported by the Health and Safety Laboratory (HSL). AIR PT is a new scheme, started in April 2014, which combines two long running PT schemes: LGC Standards STACKS PT scheme and HSL WASP PT scheme.

AIR NO₂ PT forms an integral part of the UK NO₂ Network's QA/QC, and is a useful tool in assessing the analytical performance of those laboratories supplying diffusion tubes to Local Authorities for use in the context of Local Air Quality Management (LAQM). Defra and the Devolved Administrations advise that diffusion tubes used for LAQM should be obtained from laboratories that have demonstrated satisfactory performance in the AIR PT scheme.

The percentage of results submitted by Gradko International Ltd that were subsequently determined to be satisfactory was 100% for all tests in AIR-PT Rounds AR012-AR016 (January 2017-October 2017).

National Bias Adjustment Factor

The national bias adjustment factor for 2017 is available from the Defra website². The results of multiple co-location studies are collated, and the average bias adjustment factor is taken for studies using the 50% TEA/acetone preparation method, analysed by Gradko. The national bias adjustment factor for 2017 is 0.97, based on 22 studies, details are shown in Figure A.1 below.

² Diffusion tube bias adjustment spreadsheet March 2018, available at: <https://laqm.defra.gov.uk/bias-adjustment-factors/national-bias.html>

Figure A.1 National Bias adjustment factor

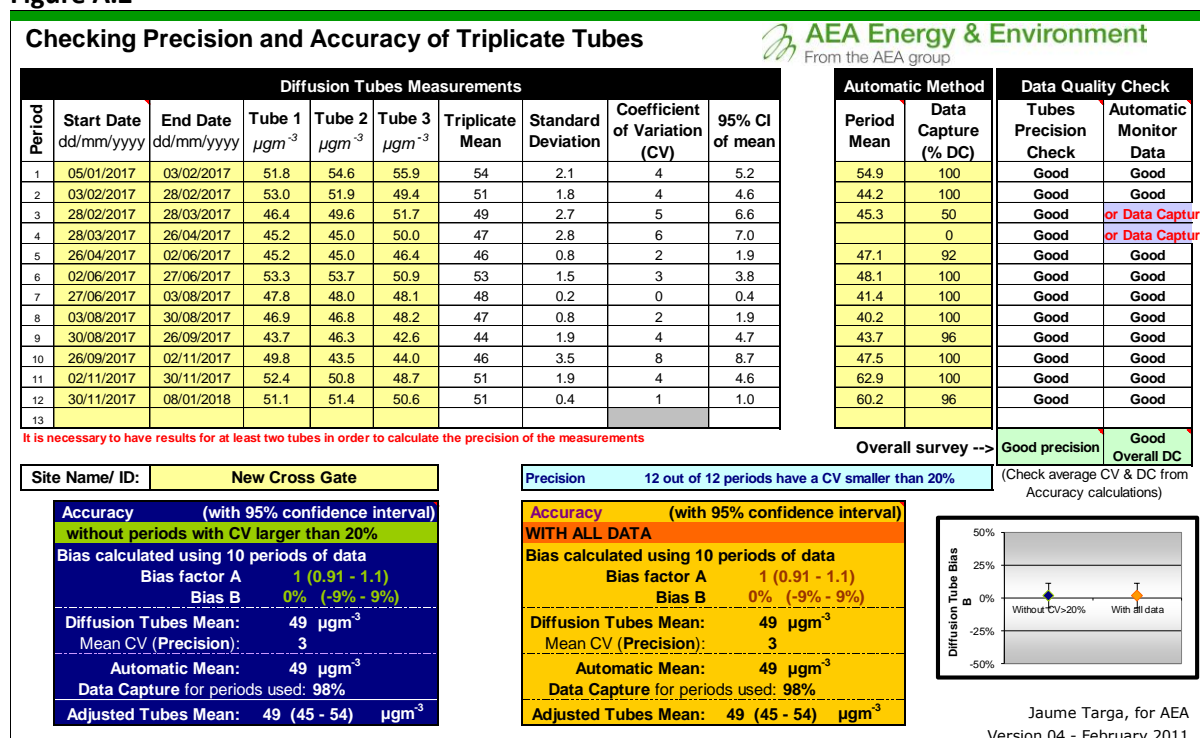

National Diffusion Tube Bias Adjustment Factor Spreadsheet							Spreadsheet Version Number: 03/18				
Follow the steps below in the correct order to show the results of relevant co-location studies							This spreadsheet will be updated at the end of June 2018				
Data only apply to tubes exposed monthly and are not suitable for correcting individual short-term monitoring periods							LAWM Helpdesk Website				
Whenever presenting adjusted data, you should state the adjustment factor used and the version of the spreadsheet							Spreadsheet maintained by the National Physical Laboratory. Original compiled by Air Quality Consultants Ltd.				
This spreadsheet will be updated every few months; the factors may therefore be subject to change. This should not discourage their immediate use.							The LAQM Helpdesk is operated on behalf of Defra and the Devolved Administrations by Bureau Veritas, in conjunction with contract partners AECCOM and the National Physical Laboratory.				
Step 1:		Step 2:		Step 3:		Step 4:					
Select the Laboratory that Analyses Your Tubes from the Drop-Down List		Select a Preparation Method from the Drop-Down List		Select a Year from the Drop-Down List		Where there is only one study for a chosen combination, you should use the adjustment factor shown with caution. Where there is more than one study, use the overall factor ³ shown in blue at the foot of the final column.					
If a laboratory is not shown, we have no data for this laboratory.		If a preparation method is not shown, we have no data for this method at this laboratory.		If a year is not shown, we have no data.		If you have your own co-location study then see footnote ⁴ . If uncertain what to do then contact the Local Air Quality Management Helpdesk at LAQM-Helpdesk@uk.bureauveritas.com or 0800 0327953.

Factor from Local Co-location Studies (if available)

LB Lewisham has one co-location site at New Cross (LW2), where triplicate diffusion tubes are co-located adjacent to the inlet of the continuous monitor, so that diffusion tube concentrations can be adjusted for bias by comparing to the more accurate continuous monitoring dataset. A spreadsheet tool for calculating the locally-derived bias adjustment factor for triplicate tubes co-located at a continuous monitor is available from the Defra website³. The local bias adjustment factor for 2017 at LW2 is 1. Figure A.2 below shows the calculation.

³ Local bias adjustment factor tool available at: <https://laqm.defra.gov.uk/bias-adjustment-factors/local-bias.html>

Figure A.2

Discussion of Choice of Factor to Use

Based on the fact that the local bias adjustment factor is slightly greater than the national bias adjustment factor, to be more conservative when reporting annual mean NO₂ concentrations, it has been decided to use the local bias adjustment factor. In the past 7 years it has predominantly been the national factor that has been used. Table L details the bias adjustment factors for this year and previous years in LBL, including the choice of factor used for each year.

Table L: Bias adjustment factors for Lewisham between 2011 and 2017

Year	Local factor	National factor	Factor used
2011	0.59	<u>0.94</u>	National
2012	0.78	<u>1.01</u>	National
2013	0.93	<u>1.00</u>	National
2014	0.82	<u>0.97</u>	National
2015	<u>1.02</u>	0.95	Local
2016	0.92	<u>1.03</u>	National
2017	<u>1.00</u>	0.97	Local

A.3 Adjustments to the Ratified Monitoring Data

Short-term to Long-term Data Adjustment

In 2017, there was one monitoring location that recorded a data capture rate lower than 75% for NO₂, this was diffusion tube L37 (St James Hatcham). This was due to commissioning the site in October 2017. For the NO₂ annualisation calculations for L37, three urban background continuous monitoring stations were used, with an average data capture of 97%, to calculate annual mean to period mean ratios. Details of the calculation for the short-term to long-term adjustment of annual mean NO₂ and

PM₁₀ concentrations for L37 are shown in Table M. Where the period mean is 26th September 2017 to 8th January 2018.

Table M. Short-Term to Long-Term Monitoring Data Adjustment

Site	Site Type	Annual Mean (µg/m ³)	Period Mean (µg/m ³)	Ratio
London Bexley	Suburban Background	24.5	28.7	0.85
London Eltham	Suburban Background	19.3	21.5	0.89
London Bloomsbury	Urban Background	37.9	42.3	0.90
Average				0.88

Distance Adjustment

Although a small number of diffusion tubes are not located at relevant exposure, such as on kerbside lampposts as opposed to building facades, in order to maintain consistency for analysing diffusion tube trends over several years, NO₂ concentrations at these locations have not been distance corrected.

A.4 Annual Mean NO₂ concentration Trend Analysis

To clearly understand and visualise the trends in annual mean NO₂ concentration over the last 7 years, plots of the annual concentrations recorded at all NO₂ monitoring locations have been produced and are shown below in Figures A.3 to A.6, where AQO is the annual mean Air Quality Objective (40 µgm⁻³) and AQO (ST) is the short term Air Quality Objective (60 µgm⁻³).

Figure A.3 Trend in NO₂ Concentration at roadside diffusion tube locations (1)

Note: AQO (ST) = 60 µgm⁻³. Diffusion tubes cannot be used to directly compare against the 1-hour mean NO₂ objective. However, LLAQM.TG16 states that at locations where annual mean NO₂ concentrations of greater than 60 µgm⁻³ are monitored the 1-hour mean NO₂ objective is likely to be exceeded.

Figure A.4. Trend in NO₂ concentration at roadside diffusion tube locations (2)

Note: AQO (ST) = 60 µgm⁻³. Diffusion tubes cannot be used to directly compare against the 1-hour mean NO₂ objective. However, LLAQM.TG16 states that at locations where annual mean NO₂ concentrations of greater than 60 µgm⁻³ are monitored the 1-hour mean NO₂ objective is likely to be exceeded.

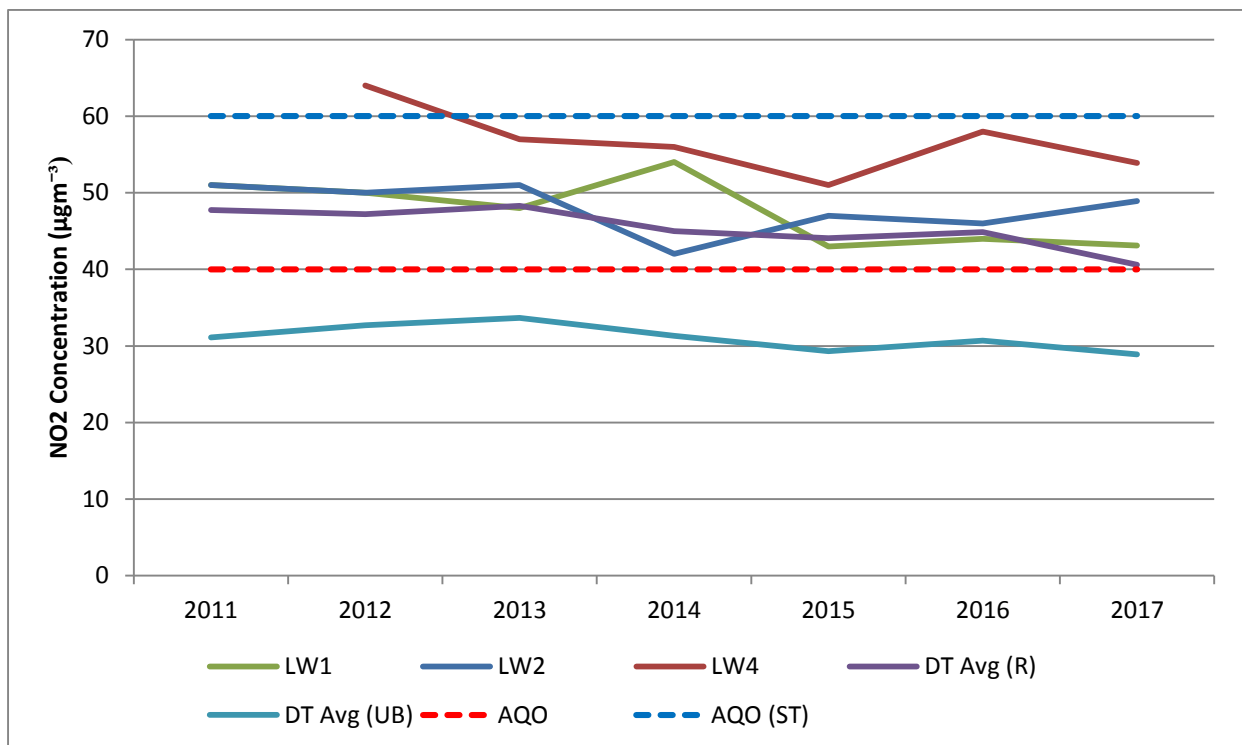

Tube L27 was re-located to a much busier roadside location in 2015.

Figure A.5. Trend in NO₂ concentration at urban background diffusion tube locations

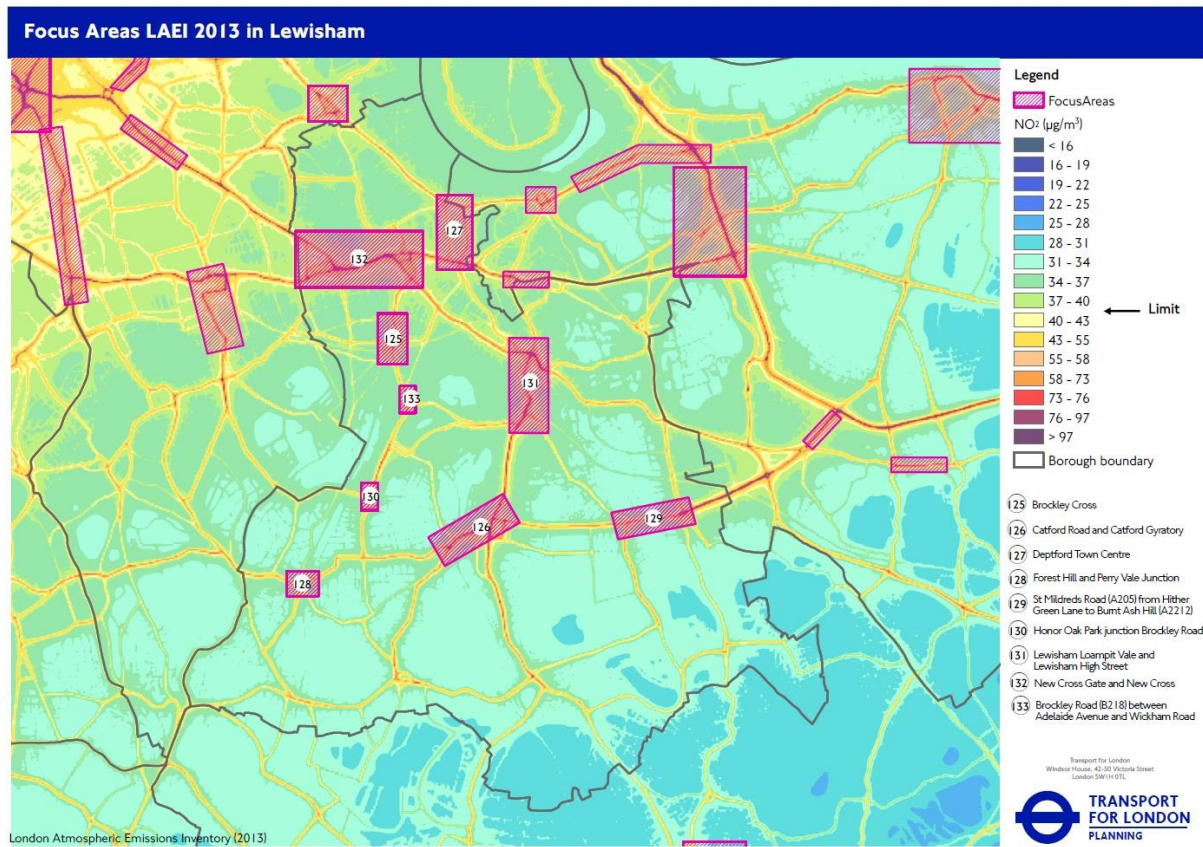

Note: AQO (ST) = 60 µgm⁻³. Diffusion tubes cannot be used to directly compare against the 1-hour mean NO₂ objective. However, LLAQM.TG16 states that at locations where annual mean NO₂ concentrations of greater than 60 µgm⁻³ are monitored the 1-hour mean NO₂ objective is likely to be exceeded.

Figure A.6. Trend in NO₂ concentration at continuous monitoring locations

Note: AQO (ST) = 60 µgm⁻³. Diffusion tubes cannot be used to directly compare against the 1-hour mean NO₂ objective. However, LLAQM.TG16 states that at locations where annual mean NO₂ concentrations of greater than 60 µgm⁻³ are monitored the 1-hour mean NO₂ objective is likely to be exceeded.

Figure A.7. Air Quality Focus Areas in London Borough of Lewisham

Exceedance of the NO₂ annual mean AQO of 40 µg m⁻³ are shown in **bold**.

^a Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year

^b Data capture for the full calendar year (e.g. if monitoring was carried out for six months the maximum data capture for the full calendar year would be 50%)

^c Means should be “annualised” in accordance with LLAQM Technical Guidance, if valid data capture is less than 75%
